## KEY FIGURES 2023

Sales	473.2 million
EBITDA	48.1 million
Adjusted EBIT*	24.3 million
Production sites	7
Employees	2,548

\*before non-recurring charges

Over 50 years of history and global leadership in kitchen extraction systems. An innovative Italian company at the forefront of the design and manufacture of kitchen appliances. A European reference in electric motors for household appliances and boilers.

Seven production sites in Italy, Poland, Mexico and China.  
Listed on the Italian Stock Exchange since 2006, in the Euronext STAR Milan segment.

These are the key figures of Elica Spa, achieved under the continued guidance of Francesco Casoli, Elica's Chairman.

Achievements inspired by values that have always guided each project, product, and activity:

- design, which seamlessly combines aesthetics and performance for an exceptional cooking experience;
- art, as a beacon of creative processes and working methods;
- innovation, facilitating technology capable of enhancing product features.

The main Business Units of the Elica Corporation are:

### COOKING BU

responsible for the design, manufacture and marketing of kitchen hoods, cooking consoles, hobs, ovens, and wine coolers, for both our own brands and for major international brands, along with ovens and kitchenware sterilisers for the Asian market.

### MOTORS BU

responsible for the design, manufacture and marketing of electric motors for the heating, ventilation and household appliances market through its subsidiary EMC FIME.

# Extraordinary Cooking.

Being extraordinary is a mindset, a way of being and thinking.

It's being inventive, it's embracing a pioneering spirit; it's an engine that ignites every day with new ideas, opportunities, and experiments.

For us, being extraordinary has nothing to do with being eccentric, elitist, or unconventional at all costs. It's about thinking outside the box, creating beauty, value, and delivering increasingly functional, user-friendly products. Being extraordinary is the art of inventing the future: in the kitchen and in life.

## OUR HOUSEHOLD APPLIANCES

Under the Elica brand we design and manufacture over 150 models of:

wall-mounted, built-in, island, corner, ceiling and downdraft kitchen hoods

gas and induction extractor hobs

LHOV

ovens

induction hobs

wine coolers

The design of our household appliances feature exceptional aesthetics and high functional performance, within everyone's reach.

# Sparks.

Ours is a story of sparks.  
Strokes of genius, flames of fire, intense  
passion brimming with ingenuity.  
It's an energy that ignited over 50 years  
ago and has illuminated our challenges,  
setbacks and comebacks.  
And it continues to burn brightly.

## ERMANNIO CASOLI

In **1970**, Ermanno Casoli, a veterinarian from Fabriano made his first kitchen hood and founded Elica Spa. He was a visionary and art enthusiast who would soon become an unforgettable entrepreneur.

In **1972**, he presented the first duct out hood for kitchens. In the same year he signed his first agreement with Philips. Success came immediately; the company harnessed vertical growth.

## THE STRENGTH OF A FAMILY

A tragic event cast a shadow over those bright years: Ermanno Casoli passed away too soon in 1978. His wife Gianna Pieralisi and their teenage son Francesco Casoli inherited not only the company, but also its burdens, responsibilities, and above all, the founder's exceptional perseverance. And so, just 4 years later, the first "Lego" hood was created in **1982**.

In **1990**, Francesco Casoli took the helm as CEO.

In **1994**, the Serra San Quirico production site was opened along with the Elica Propulsion Laboratory: a state-of-the-art centre for safety, efficiency and electromagnetic compatibility testing of materials and products.

## FLAMES

**1995** was a most disastrous year: the Fabriano production site was completely razed to the ground by a fire. Operation "Araba Fenice" came to the rescue, rebuilding it in just 4 months, with the help of all employees.

## REFOUNDATION

Starting afresh with renewed energy, countless highlights illuminate the years ahead.

In **1997**, the Ermanno Casoli Award was established. In **1998**, the Mergo production site was built. In **2001** Elica acquired control of FIME, a leader in the design and manufacture of motors.

### From Italy to the world, mission complete.

In **2002**, Elica formed “Ariafina co. Ltd”, a joint venture located in Japan.

In **2004**, OM, the first vertical hood, was introduced and in **2005** STAR the first chandelier-style island hood. In **2005**, FIME Polska was founded.

In **2006**, Elicamex was founded and the Queretaro production site in Mexico opened.

In the same year, Elica made its debut on the Italian stock exchange.

In **2007**, SPACE, the quietest hood on the market, was unveiled.

The Ermanno Casoli Foundation (FEC) was established with the aim of fostering art and creativity.

## AWARDS & ICONS

The path is marked with new achievements pursued through talent, determination, and vision.

In **2009**, Elica won the Etica&Empresa (Ethics&Enterprise) award and received Top Employer certification.

**2010** kicked off with more iconic products:

Feel, the first hood with sensory technology; Ico, the most energy efficient hood; Bubble, made of technopolymers. In the same year, Elica acquired “Zhejiang Putian Electric co. Ltd” located in China. In India, the “Elica PB India Private Ltd.” joint venture was set up.

In **2011**, “Elica Trading Ilc.” was established in Russia, with offices in Moscow and Saint Petersburg. The company also won the Great Place to Work Italy & Europe award.

Elica Polska was certified as Top Employer and won the “Gazele Biznesu” award. **2012** was the year of the 35CC, the 35-centimetre hood; and Sweet, a contemporary reinterpretation of an earlier design.

It’s a hunch that leads to a breakthrough. In **2014**, Elica France was established in France.

In the same year, Ye, the first sculpture-like hood made of Cristalplant, was created.

In **2015**, Elica opened offices in Barcelona Spain.

In **2016**, the NikolaTesla line was launched: a revolutionary line of induction hobs with integrated an extraction system.

In **2017**, Elica GmbH was established in Munich, Germany.

#### THE COMPASSO D'ORO AWARD

In 2018, Elica won the Compasso D'Oro award with its NikolaTesla One extractor hob. NikolaTesla One.

#### TODAY

Elica is an industrial group listed on the stock exchange. It employs 2,600 people and has 7 production sites located in Italy, Poland, Mexico, India, and China. It is a cutting-edge company specialised in the production of cooking consoles, hobs, ovens, and wine coolers, all of which are renowned for their distinctive design and innovative features.

It is a global leader in kitchen hoods and a European reference in the electric motors segment for household appliances and boilers.

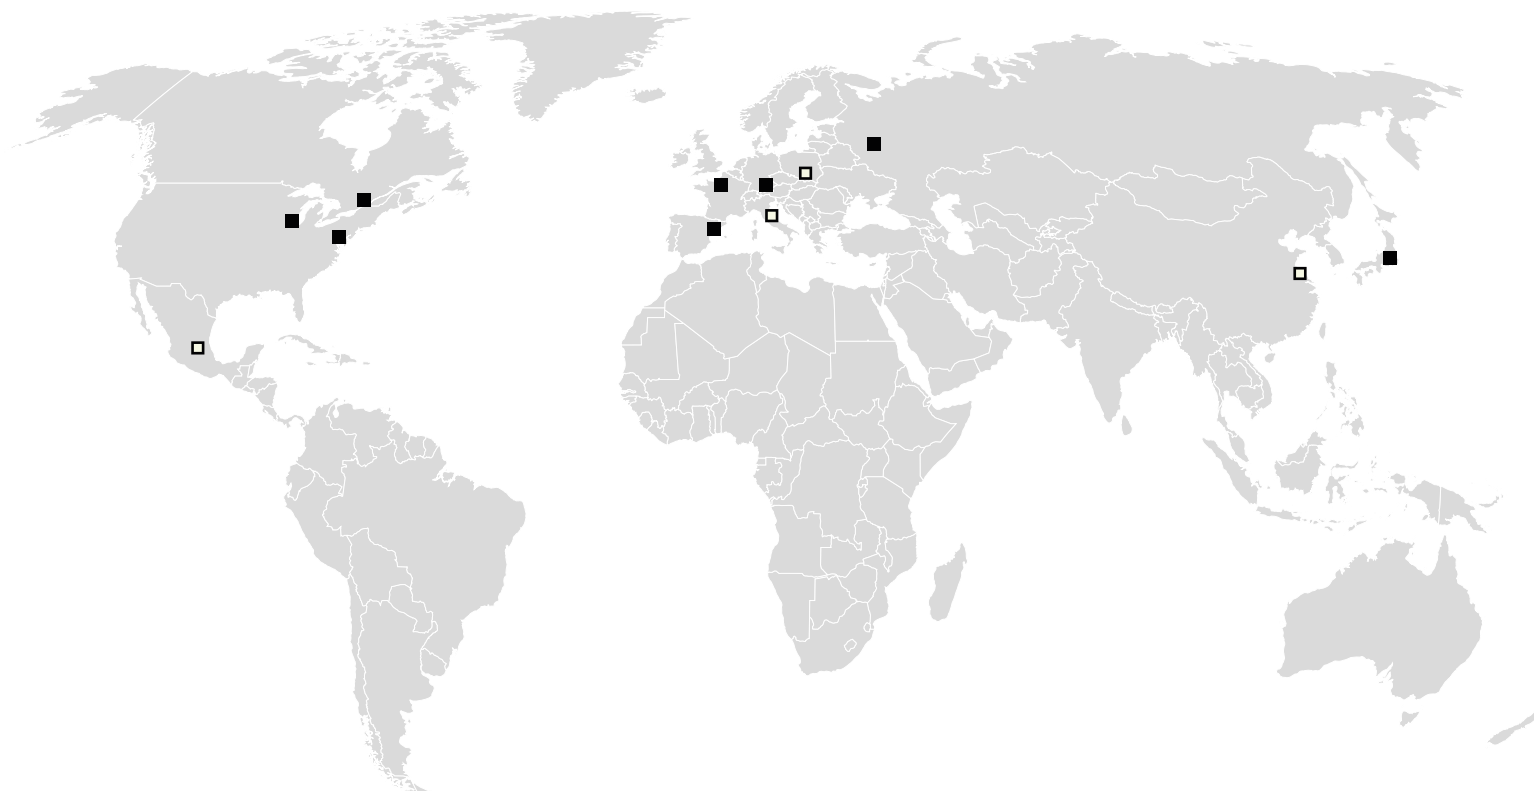

# Italian heart, international presence.

We are Italian.

Our headquarters have always been in Fabriano, the town where we were born and where our roots run deep.

Over the years, we have steadily expanded our presence in the international market. Today, we are an international player, a global leader in the kitchen hoods sector, and the European reference in the field of motors for boilers.

## ITALY

Our headquarters are located in Fabriano, in the province of Ancona, along with the production site and the head R&D laboratory. Other production sites are located in Mergo and Cerreto d'Esi. Our business unit EMC FIME, specialised in motors for heating and ventilation, is located in Castelfidardo (also in the province of Ancona).

## EUROPE

We operate in:

- Poland, through Elica Group Polska. The production site is located in Jelcz Laskowice, inside the industrial hub of Wrocław, which is also one of the most important centres in Eastern Europe;
- Germany, through Elica GmbH;
- Spain, with a designated organisation;
- France, with Elica France - located in the centre of Paris.

## THE AMERICAS

We are also present in Mexico via Elicamex, with production and sales headquarters in Querétaro. It handles the United States and Latin America areas. Our strategic proximity to these markets enables us to capitalize on every OEM (Original Equipment Manufacturer) business opportunity and to facilitate the launch or development of brands and products. In 2023, the company further expanded its presence by establishing two new subsidiaries: South Appliance Inc. and A.G. International Inc.

## ASIA

Our presence in Asia began in 2002 through a joint venture with Fuji Industrial, a Japanese leader in the production of kitchen hoods (of which we have held control since 2006). This resulted in the creation of Aria fina, the high-end brand of kitchen hoods in the Japanese market, with the subsequent opening of the Osaka showroom in 2005.

In 2010, Elica made its debut in China by acquiring a controlling interest in Zhejiang Putian Electric Co. Ltd. The company owns the Puti brand, through which we manufacture and market hoods, gas cooktops, and kitchenware sterilisers in the world's largest market in the sector. The production site is located in Shengzhou, which is one of the most renowned industrial districts in China. In 2012, Elica sold to Fuji Industrial Co. Ltd. a 3.24% stake in Zhejiang Putian Electric Co. Ltd., strengthening the cooperation with its Japanese partner.

## RUSSIA

In 2012 we reinforced our business in this market with our older brands present since 1995. We acquired the subsidiary Elica Trading LLC (which markets and sells products under its own brand such as Elica, Jet Air, and Turboair). Established in 2011, it is based in Saint Petersburg and Moscow: thanks to its warehouses it is able to serve all of the local distribution network.

# Our Companies & Brands.

## Cooking.

### **elica**

This brand was created at the same time as the company, with a history spanning over 50 years. Innovative design, air quality, high performance within everyone's reach, and low energy consumption. These are the underlying features of each and every household appliance, from kitchen hoods to hobs, from ovens to wine coolers. And cooking has become extraordinary.

This brand represents household appliances in the mid-to-low price range designed for the retail segment in the Far East and the CIS (Commonwealth of Independent States) markets.

This brand, created through the joint venture with Fuji Industrial, represents kitchen hoods specifically tailored for the high-end Japanese market. Ariaфина household appliances combine the finest Japanese technology with unmistakable Italian design.

### **arietta**

This brand represents highly competitive kitchen hoods, specifically designed for the North American market. Reliability, functionality, aesthetics, and quality are an integral part of each product offering.

A renowned brand in the Russian market, it is especially popular due to its Made in Italy values: design that seamlessly integrates functionality, aesthetics, and cutting-edge innovation.

Acquired as part of the Chinese joint venture, Puti is one of the top-selling brands in its target market for hoods, hobs, and kitchenware sterilisers. In particular, these kitchen hoods cater to the mid to high-end market segment with their exceptional design and superior features.

# Motors.

## MOTORS FOR HEATING AND VENTILATION.

It is a company of the Elica group, European leader in the design, manufacturing and sale of electric motors for heating, ventilation and household appliances.

The know-how gained in over 40 years of history and the management of the entire production process has enabled EMC FIME the entire group to achieve top results in terms of performance, energy efficiency and new solutions in electric and hydrogen.

# Ispire, aspire.

To breathe.

An involuntary and necessary action,  
which our life depends on.

An act that becomes the paradigm of Elica.

A design that gives shape to air, transforming every moment in the kitchen into an architectural, aesthetic, and functional experience. Open to everyone.

It's a design that inspires and is inspiring. It always sets its sights high, delving into different worlds: art, culture, societal trends, and the changes in how we live. It changes perspectives, studies experiences, it stays one step ahead in order to successfully meet future needs. It envisions new household appliances for new spaces. For new people.

It's also a design that aspires to make life better. It captures fumes and delivers clean, healthy air. It controls vapours, enhances recipes and food preparations. It removes condensation, controls cooking processes, invents functions, reduces consumption. It interconnects both household appliances and people, unleashing creativity.

**And so, cooking becomes extraordinary.**

# Memory of the future.

We share a visceral connection with the world of art. It's a passion passed down to us from our founder, Ermanno Casoli.

It's not simply about admiration. It's more about embracing exploration and experimentation. It's about constantly raising the bar. And with this, our creative process. It's how we work. Artists are visionaries, free, open to all nuances of the future, even the darkest ones.

Their task is to show us new pathways, new ideas, and new opportunities. Our task is to translate them into tangible value and cutting-edge household appliances.

Taking risks, exploring, and even making mistakes.

Our founder instilled in Elica the belief that art is the master of life. An engine of creativity, innovation, progress.

It is him, to whom we dedicate our work.

It is him, the namesake of our Foundation.

**The Ermanno Casoli Foundation.**

## FEC

The Ermanno Casoli Foundation (FEC) was established in 2007. Its aim has always been to promote activities in which art serves as an educational tool and method to spark innovative processes, even within the workplace. A pioneer in exploring the potential of the dialogue between art and business, the foundation has become a model for corporate training in Italy.

Every year, art comes into the company with a fixed programme of award-winning and internationally recognised events. There are two main activities: E-sstraordinario a cycle of workshops that puts the artist at the centre of the training process, and the Premio Ermanno Casoli, awarded to artists who show particular sensitivity to social issues and haring their work. Since 2013, these two projects have been complemented by E-sstraordinario for Kids, the art workshop dedicated to employees' children.

All activities include workshops where internationally renowned artists work with Elica employees to create works of art that then remain in the company. This special collection was included in the volume "Global Corporate Collection" (2015), dedicated to the 100 most beautiful corporate art collections in the world and in the publication promoted by Confindustria "The sign of art in business. Italian corporate collections for modern and contemporary art" (2024).

# FEC

# Going Beyond.

Going beyond what already exists.  
Going beyond the usual limits, standards  
and clichés.

This is innovation according to Elica. A passionate and practical approach that defies rules with expertise, research, and technique. Improving everyone's daily life with new solutions that are both accessible and simple to use.

Innovation is visionary and pragmatic. It gazes at the stars with its feet firmly planted to the ground. It springs to life in intentions and intuitions, but also through facts and figures.

Otherwise, it does not exist.

## PATENTS

To date, we have filed about 900 patents:

# 300+

regarding cutting-edge technology

# 600+

regarding new design solutions

## ELICA PROPULSION LABORATORY (EPL)

Established in 2007, this is the hub where we certify innovative products that are in compliance with safety, energy savings and electromagnetic compatibility related standards and regulations. Open to the outside world, it is utilised by Italian and international companies operating in various sectors:

- household appliances,
- electronics,
- refrigeration,
- heating,
- electronic traffic lights,
- soundproofing materials for buildings.

EPL is certified under UNI EN/IEC ISO 17025 standards and serves as a technological hub for research, verification and certification of materials, components, and finished products. Equipped with cutting-edge technological tools, it boasts a team of highly skilled professionals with expertise in electrical, mechanical, physical, electro-technical, and chemical engineering. The testing areas cover electrical and mechanical safety, energy efficiency, noise analysis and measurement, electromagnetic compatibility, and the reliability of materials, components and finished products.

# People are at the core of what we do.

Our employees.

Our designers, researchers, engineers.

Our executives, our specialists.

Our independent contractors and our suppliers.

And our customers.

People are at the core of what we do, with household appliances designed to deliver the best performance in everyone's kitchens.

And with that comes commitments involving actions, choices, and objectives, forging the path at a personal and, only after that, a professional level.

## ELICA ASPIRATIONS LAB

It serves as the corporate hub to provide training and for the development of new skills. Open to employees and independent contractors, the aim of this lab is to explore capabilities and knowledge, guiding individuals towards personal, intellectual, and professional growth.

## CASA ELICA

This villa in Fabriano is the historic residence of the Casoli family: an iconic location, a treasury of memories and opportunities for new activities. In 1970, this where the founder of Elica created his first hood; today, it welcomes events, meetings and initiatives that foster exchanging views, creativity, and experimentation.
